Contents:

- Printed-circuit card with mounting bracket
- 5¼-in. diskette with conversion software
- User's manual (insert for IBM binder)

Features:

- Z80B* microprocessor running at 4.77 MHz
- 64K of onboard, dual-ported, parity RAM
- Memory fully available to PC's DOS
- Software for conversion of CP/M-80* programs and data files
- Accepts several popular CP/M 5¼-in. soft-sectored disk formats
- 63K of user memory for CP/M programs
- Supports PC's peripherals: keyboard, video boards, printer, Asynchronous Communications Adapter
- Emulates popular Televideo 950 terminal for applications requiring cursor addressing
- Permits mixing of CP/M and DOS programs, with common data files
- 90-day limited warranty (details inside)

*Z80 is a trademark of Zilog, Inc.
CP/M is a registered trademark of Digital Research.

Installation:

1. Turn system off.
2. Unplug everything.
3. Remove cover mounting screws at rear of System Unit and slide cover forward and remove.
4. With screwdriver or 3/16-in. nutdriver, remove slot cover for any available expansion slot.
5. For a system with 64KB (before adding Baby Blue), set system-board DIP Switch 2 and Baby Blue's own DIP switch as shown below. (For systems with more or less than 64KB, see detailed installation instructions in user's manual.)

6. Plug Baby Blue into the slot.
7. Align hole in Baby Blue's retaining bracket with wide hole in System Unit rear panel, replace and tighten screw.
8. Replace System-Unit cover and its mounting screws.
9. Plug in system and peripherals.
10. Use CHKDSK or your IBM diagnostic disk to confirm presence of additional memory.
