

SUPERVISION™

WITTY CAT

I. GAME DESCRIPTION

Morry is a poor mouse. His parents died when he was young. Thus, he has to search food for living. However, the place where food can be found is full of traps, blocks and guards (Witty Cats). Let's see whether you can save Morry's life.

II. PLAYING INSTRUCTION

The logo and title screen will be shown after you turn on the power. Afterwards, games will be started once you push the START key. There is altogether nine levels in the game and Morry has three lives initially. After Morry gets all the food on the screen, it will be moved to the next level. And an extra life will be given if Morry gets twenty thousand score. Morry can avoid cats by jumping on strings or closing doors along the corridors. While Morry is vertically jumping on springs, it will not be killed by Witty Cats. However, it can be killed while jumping when it meets the Big Face Beast. In normal conditions, Morry will also be killed when it is being caught or trapped in the corridors.

There is two types of doors. Both can be opened or closed by pressing either the A-Key or B-Key. The thinner doors are designed with no special function except to block the corridors. Opening and closing the doors at the right moment may save Morry's life when it is nearly caught by the Witty Cats. There are special doors which will help Morry to escape in emergencies. These doors appear thicker and arrows will be fired once the doors are opened. These arrows will kill the enemies in the paths.

III. SCORING

Scores will be rewarded whenever food is taken. The actual score granted depends on the type of food taken and it varies from 100 to 500. Extra bonus points will be given if you successfully trap and shoot the Witty Cats, 100 scores will be given for a small one and 200 scores will be given for a big cat.

IV. KEY ASSIGNMENT

<u>KEY</u>	<u>FUNCTION</u>
START	Start / pause the game (score obtained will be shown when you pause the game)
A & B	Open / close door
RIGHT	Move to the right
LEFT	Move to the left

Press A-key, B-key, SELECT and START key together to return to the title screen.
