

The perfect solution from Quadram

Here's what the experts say about the revolutionary Quadlink:

"Quadlink's capacity for growth and Quadram's commitment to support make this product a good buy for today's computer owner."

Popular Computing March 1984

"If you have Apple programs that you still regularly use but want access to both the IBM PC's power and library with only one machine cluttering your desk, the Quadlink is the perfect solution."

PC Magazine February 21, 1984

"Quadlink is a viable solution to all those who wish to have both an Apple II program capability as well as an IBM PC capability on a single computer. Quadlink's ability to handle Apple II programs substantially lives up to the claims being made for it."

Personal Computer Age Magazine October 83

"...I found the Quadlink to be amazing — pressing a few keys changed one computer into another and back again."

PC Magazine February 21, 1984

Quadram Quality built

Quadlink comes built for dependability and performance in the continuing tradition of Quadram Quality. And includes a full one year warranty and complete technical support.

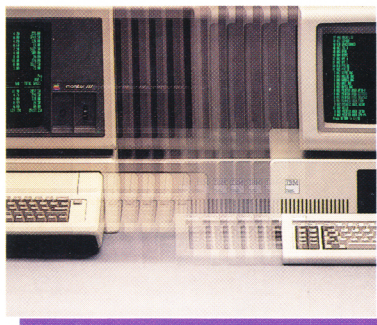

So enhance your IBM PC or PCXT with double the computing power. With Quadlink, the Apple of your IBM.

**The Apple
Of Your IBM**

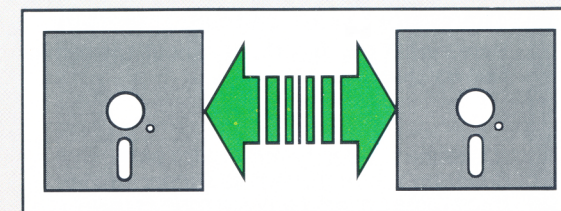

Quadram presents Quadlink, the revolutionary expansion card that turns your IBM Personal Computer (or PCXT) into an Apple compatible system. Simply plug Quadlink inside your PC, press a few keys, and instantly run most Apple software packages available.

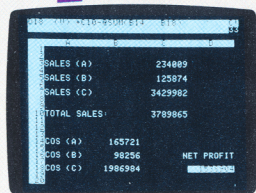

Plus, Quadlink comes with special software utilities that enhance all your programming work in the Apple mode. Including Quadcopy, the program that lets you transfer data on IBM and Apple disks back and forth.

Versatility and Teamwork

Quadlink adds versatility to any microcomputer environment. By expanding your data processing options. Use Quadlink to process one program in the Apple mode while you develop another in the

Quadlink comes with Quadcopy, the program that lets you transfer data on IBM and Apple disks back and forth.

An Apple Inside Your IBM

Quadlink gives your system double the computing power. By putting an Apple II+ compatible computer inside your PC. When you're working in the Apple mode,

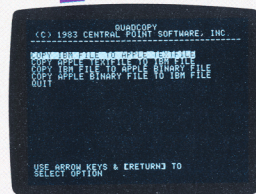

thousands of software packages written for the Apple II+. And with Quadlink, there's no diskette reformatting needed. Just insert the Apple disk in the IBM drive and watch it go.

Enhance your Personal Computer

With Quadlink, your Personal Computer now has access to the largest software library ever written. Business, educational, and entertainment packages.

Quadlink lets you take advantage of such popular Apple programs as **Screenwriter II**®, the **Magic Window Series**®, and **Terrapin's**® Logo Language for children.* Quadlink can even run under Apple's new operating system, **ProDOS**®. This means your PC can now do more than ever before. In more ways than ever before.

More computer equals more power

Quadlink works in the system to give you two powerful computing modes. And switching between modes is as easy as a few simple keystrokes.

Quadlink comes with 64K of RAM, a 6502 microprocessor, and uses the Input/Output devices already installed on the PC system board. So you can use Quadlink to send data to a parallel printer, or through modems to other computer terminals. You can even link Quadlink to time sharing devices in network operations.

IBM mode. Even test programs written for both the IBM PC and the Apple II+. Plus, Quadlink is perfect for mixed business environments where both the Apple II+ and the IBM PC are used. And Quadlink works in your Compaq and Columbia personal computers, too. (With our own special cabling.)
