

TWO CLASSICS UNITED.

USE APPLE SOFTWARE ON YOUR IBM PC, XT, TANDY 1000 SX OR COMPATIBLE.

Trackstar128 emulation board lets you run the Apple II, II plus, IIfx, and IIfx library of software on an IBM PC, even the copy protected programs are no problem. And Trackstar128 works this seeming magic with great ease. Trackstar128 will give you extras like 128K ram, file transfer between Apple II files (text or binary) and MS-DOS files, 80 column display, language card, game port, host port access and more!

Trackstar128 makes it possible for your MS-DOS computer to use all Apple IIfx graphics and text modes. It's really incredible, two computers in one. The emulation board provides the educator and parent the options and flexibility to take advantage of the new 16-bit MS-DOS technology and still have access to the wealth of Apple II software available.

Now—Two Classics United.
