

Trackstar Harnesses the Power of
IBM and Apple II Software...

...In One Machine

One of the Most Innovative Products at Comdex in Years

Finally the MS-DOS and Apple Software Libraries Run On The Same Machine

Trackstar expands the capability of your IBM PC or MS-DOS compatible machine to run both MS-DOS software and Apple II, II plus, IIC, and IIE software libraries. Trackstar has been tested by a third-party and was reported 97.75% compatible with the most popular and widely used Apple II software. Copy-protected programs also run with an external Apple-compatible disk drive. This two-system capability gives a PC user the opportunity to benefit from the wealth of educational, graphics, and game software created for the Apple II, while taking advantage of the IBM environment. Trackstar gives you extras like 128K RAM, file transfer compatibility between Apple II text, binary, PRODOS, and MS-DOS files, 80 column display, game port, host port access and more. A version of Trackstar for the IBM PS/2 models 25 and 30 is also available.

Do You Know of a Better Value?

Probably not. There is no better value than two computers for the price of one. For the value added dealer there is no better way to add value to PC's or PC clones. In the competitive PC business, Trackstar gives the dealer a decided advantage, without cutting profit margins.

Reviews

"I believe the introduction of the Trackstar was a significant breakthrough for school districts who were wrestling with purchase decisions. Schools have varied needs which are best met by a combination of operating systems used to develop software programs."

—E.O. Shaffer, Ph.D., Assistant Superintendent, Tinley Park, Ill

"Overall I was impressed by Trackstar. The design and features of the system are superior to its major competition. Trackstar ran without problem all software I tried, including the major Apple word processing and data base programs...The technical support staff proved friendly and knowledgeable—better than most firms I've dealt with."

—Michael Callery, *Computer+Software News*

"The Trackstar lets you run programs for the Apple on an IBM PC. And it works this seeming magic better than any other product like it."

—*Computer Buyers Guide and Handbook*

"I was very pleasantly surprised at the extent to which the Trackstar is compatible with our products. Being in the testing department, I have had a chance to use many different hardware emulators and have generally been

disappointed with their results. It was a nice change of pace to use the Trackstar 128."

—Dave David, Asst. Testing Supervisor, Broderbund Software

"After using the Trackstar system and looking at the compatibility testing done on it, I can't help but be impressed."

—Bradford M. Dixon, *80 Micro Magazine*

"We use the file transfer extensively. It is a great advantage to be able to check the file transfer on the same machine you are using for transfer. It saves having to walk the software over to another computer. I am very happy with the board."

—Clyde Lee, Syteck Corporation, Houston, Texas

"The Trackstar 128K's level of compatibility is very impressive."

—Larry Pogue, *Electronic Learning*

"I believe that Trackstar offers to the educator, the parent, and many others a tremendous desired degree of flexibility."

—Dr. Chris Templar, Johnson Bible College, Knoxville, Tennessee
