## Modifying Trackstar Disk Adaptor Cable

The disk drive adaptor cable should be modified to be used for the Tandy 1000TX computer as follows. The thick wires of the cables, which are colored wires, indicate "Pin 1" of the cables. "Pin 1" should match one another.

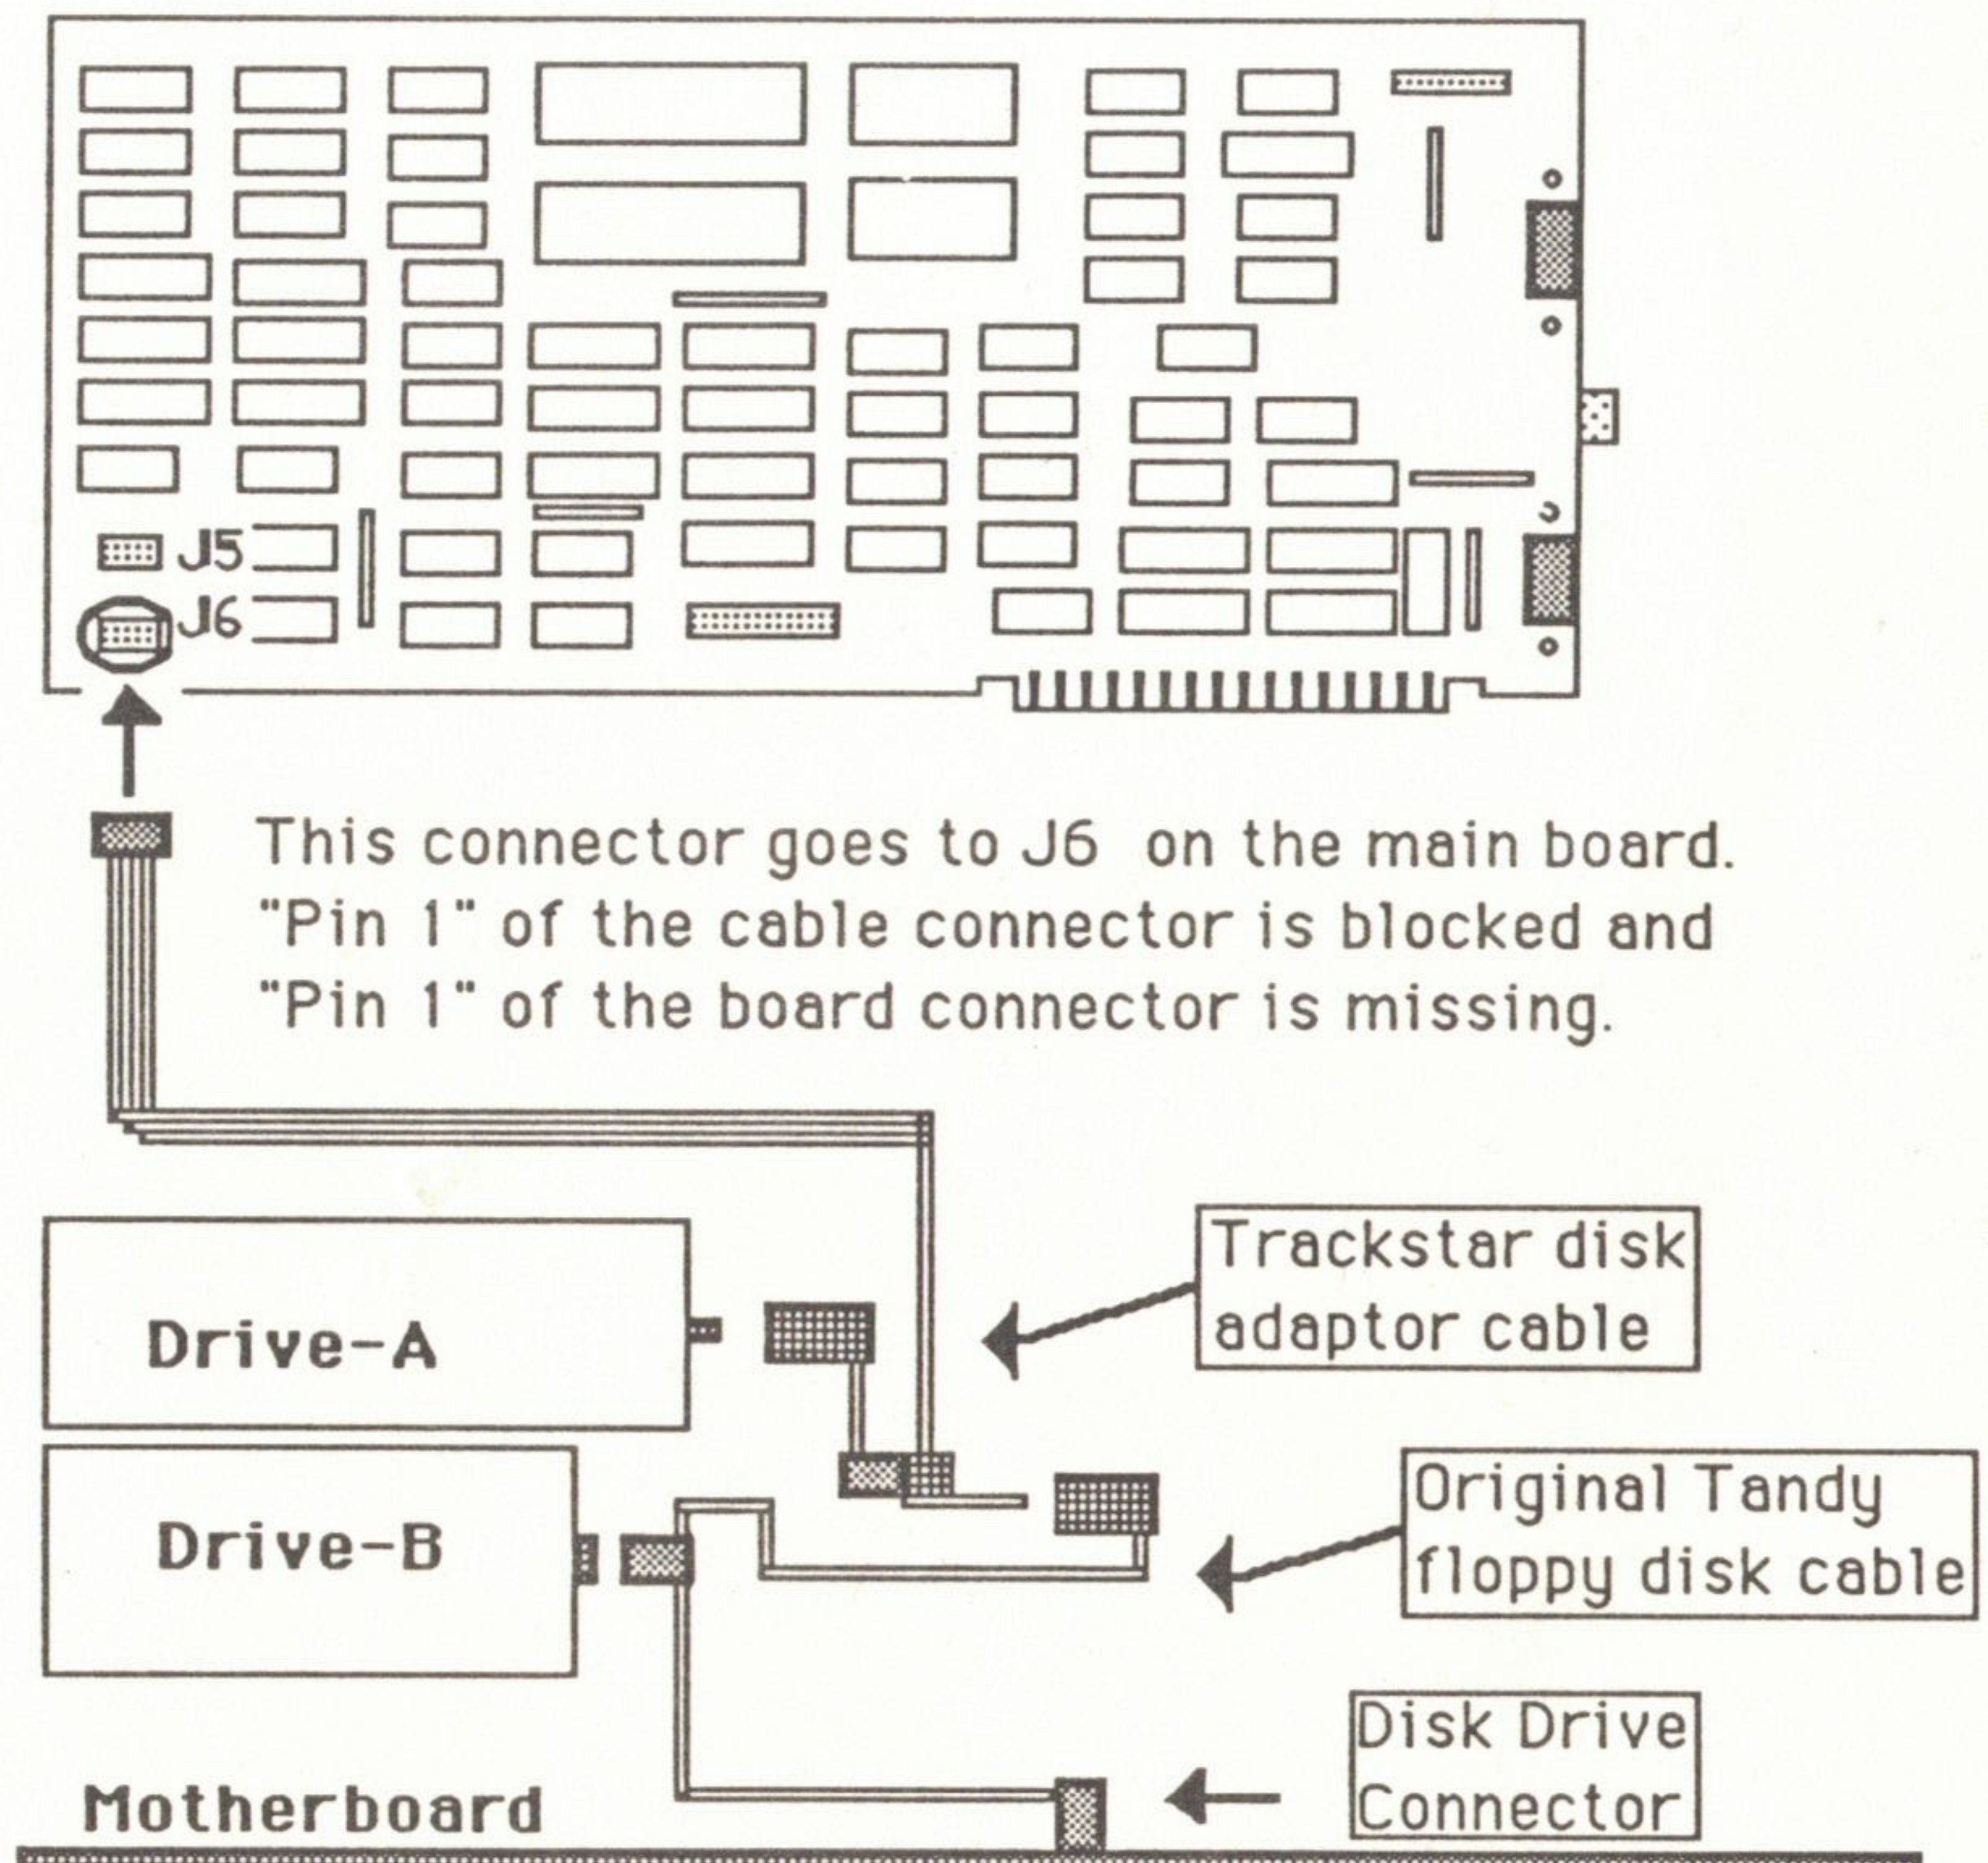

## Disk Adaptor Cable Connection

When the modification of the Trackstar disk adaptor cable is finished, the adaptor cable should be connected between the 5 1/4" disk drive and the original floppy disk cable as follows.

A capacitor should be installed in the drive if it is a TEAC 5 1/4" drive. (Refer to page 33 of the manual. Pins 4 and 5 are used for TEAC FD 55BR-521-U disk drive.)
